

INFORMATION SHEET

3B WOOD BURNING PIE POD 05-05-15

SILENT SIMPLICITY JUST FOR YOU

BAKE, BOIL & ROAST, FRY, SIMMER & TOAST. ©

"HAVE YOUR CAKE AND EAT IT"

We can do a lot better than that.

How about cook it, keep yourself warm and in some cases heat your domestic water.

The icing on it is the smile on your face when you realise that the whole process costs a few logs and no electricity, save money and join the fun.

The 3B Pie Pod is feature packed, wood fired stove incorporating a practical rectangular oven space above.

Use the base of the oven to boil, fry, toast and cook pizzas, the middle of the oven for roasts and bread baking and the top of the oven for pastries whilst simmering takes place on the stove top plate.

Bring electricity free, self sufficiency, a little closer!

About the Oven

- Features

Rectangular, dome topped oven heated on all five sides with oven vent.

6mm thick, heavy duty, replaceable steel oven bottom plate.

Oven sizes are 300 wide x 230 deep x 230 high. (113/4" x 9" x 9")

Longer lasting stainless pastry tray and matching wire rack with lifting tool.

Two position stainless tray supports.

Glass panelled oven door with temperature gauge.

Stay cool oven door handle.

- Oven Function

Before we can get the oven working correctly we have to have a good combustion system under it to provide the right type of flames from which we can heat the oven.

Flames rise vertically from the fire and hit the stainless baffle plate which deflects them around the bottom of the oven and then up around the sides, back and over the domed oven top passing under the simmer plate before leaving the appliance. This process ensures that the oven is taking maximum energy from the flames making the cook stove very efficient.

About the Stove

- Superb Wood Burner

It's a true wood burning oven stove with a large deep combustion chamber capable of holding quite a large load of wood fuel.

Cook in the oven and simmer on the top plate, heat your boat with a dry version or produce hot water with the boiler version.

- Ash Cleanliness

The special internal design of the combustion chamber and front fret constrains ash where it should be, inside the stove and not on the hearth in front of it.

- Super Combustion

The large capacity firebox and high temperature ling system is designed to provide much better combustion and a longer burn time allowing the stove to squeeze the last drop of

*The fire bottom is set deep down below the solid front fret allowing for good quantities of fuel to be loaded making all night burning a possibility.
Good quality seasoned hardwood is required.*

- **Clean Combustion**

Two controlled air routes into the stove.

Air wash air to help keep the door glass clean.

Over fire air for wood burning.

- **Additional Features**

Fully adjustable door hinges.

Fully adjustable door lock.

Stay cool easy to use door handle.

Stainless steel front fret.

Stainless steel baffle plate

Built in rear heat shield.

- **Optional Extras**

Stove Top Fan

Wood Fuel Humidity Tester

Fiddle Rail

Variety of Log Baskets

Cook Top Kettle.
